

- What do I want to learn or understand better?

I now have a better understanding of the javascript we use and a pretty solid idea of how the calendar will come together. We have set up a backend to be able to communicate with our database, but I still do not fully understand every step of the process since we had to look up most things and the fact that I've not done it before. Instead of just accepting that it works I will need to do some research so i understand how and why. We also have some figuring out to do when it comes to the admin page, so I'll need to put some focus on that too.

- backend works How can I help someone else, or the entire team, to learn something new?

Keep assisting others in areas where I have more knowledge and make myself available for help.

- What is my contribution towards the team's use of Scrum?

I have written and broken down user stories as well as tasks and later been part of getting them done.

- What is my contribution towards the team's deliveries?

I have, together with others, written HTML and CSS to lay out a framework for the calendar. I have also been part of making the backend for the calendar and learned about server communication.
