

Individual Reflection

Week 5

Malin Rosén

This week we dove deep into JavaScript, and set up a local server since we needed to use Node.js to be able to write to our JSON-files. This is something that I had some familiarity with, but it still took some time for our team to figure that situation out. I really want to understand it better, so I can use it in future projects, since it turned out to be a crucial part of our project.

I helped the others with some JavaScript, and we used groups again, which proved to be useful. My goal is to make the others interested in HTML, CSS and JavaScript as well, and I hope I can make that happen through explicit instruction, as well as letting them do a lot of the coding so it doesn't all fall on me.

My role as scrum master still confuses me a bit, even though I have made research on the topic. I want to have an even better understanding of the role so I can be even more useful to the team. I have to take more action as the role of scrum master, which is the only way I will feel comfortable in it.

As all other weeks, I've helped with the team reflection. I don't have any complaints on how we're working on our deliverables right now, and I just want it to continue to go as smoothly as it has previous weeks.
