

**What do I want to learn or understand better?**

I want to gain a better understanding of exactly what it is that the PO wants out of our collaboration, I do have a rough idea but I am eager to receive a bit more information about the details. I also want to continue to learn more about Scrum, specifically I would like to improve my ability to write user stories. I also think now would be a good time to learn javascript so I'm prepared for when we start coding after the easter "break".

**How can I help someone else, or the entire team, to learn something new?**

I'm making sure to keep up with everything in the course and by doing this I will be able to help my teammates with anything they might not have understood. I can also help out with software that I'm familiar with that other members might not have used before, e.g. Figma and Github.

**What is my contribution towards the team's use of Scrum?**

We haven't started using it yet, apart from for exercises, so for now I'm just trying to learn Scrum as best as I can in order to be able to contribute with as much knowledge as possible when the time comes.

**What is my contribution towards the team's deliveries?**

This week we did a Minetest workshop. To this workshop I contributed as best I could by helping out with the strategy, gathering resources and building the client-requested "sausage server", which was a great success by the way. I also contributed during the week's meetings by being active, sharing my ideas, writing on the project scope and helping out with the low-level prototype in Figma.
