

What do I want to learn or understand better?

I want to learn a bit more about what scrum is and how to use it.

How can I help someone else, or the entire team, to learn something new?

I can assist the members of my team that are not familiar with github in learning how to use it. I can also read up on scrum in advance so that I can help explain it to the team when we learn about it.

What is my contribution towards the team's use of Scrum?

At the moment I don't know much about scrum. So for now I think my contribution will be to learn about it.

What is my contribution towards the team's deliveries?

So far I have contributed with an idea for a project. I was also active in the group meeting where we wrote the social contract. Outside of the actual coding and project work I think I can contribute with a lot of positivity to make sure morale is high within the group throughout the entirety of the course. I think the most important aspect this week was for us to get to know each other and so far I'm very happy with my group.
