

- What do I want to learn or understand better?

I have a better understanding of javascript but would still get an even better understanding. I would like to understand why things in our website works and not be satisfied to just make it work. I think this can be beneficial for the project since I than are more competent to find things to improve, such as security.

- How can I help someone else, or the entire team, to learn something new?

Keep assisting others in areas where I have more knowledge and make myself available for help. I should also make sure that everyone in the group know my experience so when they get stuck know that I can help them.

- What is my contribution towards the team's use of Scrum?

I have written and broken down user stories as well as tasks and later been part of getting them done.

- What is my contribution towards the team's deliveries?

I have been writing HTM and CSS to make a lay our framework for the calendar on the website. I also spend some time making the backend of the calender.
