

What do I want to learn or understand better?

Next week I hope to improve my knowledge on JavaScript significantly. We have begun using it and so I have started to get an idea of how it works, but I still have more to learn before I can confidently code in JavaScript on my own. Luckily we have been working in groups which I believe speeds up the learning process.

How can I help someone else, or the entire team, to learn something new?

I think I have a good idea of how Scrum and the agile process works now, and so I think this is something I can continue to help the others out with when they have questions.

What is my contribution towards the team's use of Scrum?

I was active in deciding what had to be done this week and which user stories should be moved to the sprint backlog. I have also contributed in splitting them up into tasks for this week's sprint. In addition to this I actively shared my thoughts and ideas about the sprint when we wrote this week's team reflection.

What is my contribution towards the team's deliveries?

This week I contributed to the deliveries by being active in the team meetings and the decisions made by the group. I also helped create a JSON database as well as writing some JavaScript code for the dynamic informational textarea. Of course I also helped test and document this week's work using JSdoc.
