- What do I want to learn or understand better?

At the moment it would be HTML, CSS and JavaScript since it will be used in the development. Also vertical and horizontal slicing when it comes to scrum.

- How can I help someone else, or the entire team, to learn something new?

Go over useful things to the project that I've already learned and make myself available for help.

- What is my contribution towards the team's use of Scrum?

Nothing so far

- What is my contribution towards the team's deliveries?

I've been an active part in discussing and making the low-level prototype as well as writing the product description.
