What do I want to learn or understand better?

This week I learned about unit testing in JavaScript and got a better understanding of why it's important. Next week I would like to get a better idea of what should be brought up in the final presentation. I would also like to learn about granny testing and the benefits of using it to make design decisions in the future. In order to gain a real understanding of how granny testing works I should first read up on the subject to learn how it's executed and then take part in trying it out to gain experience myself.

How can I help someone else, or the entire team, to learn something new?

This week I helped some of my team members learn some functions in CSS that they didn't know. Next week I hope to help my team learn new things in any way I can, perhaps with the design or with scrum. I will reach my goal of helping my team learn new things by keeping a keen eye on anyone that might need help and by remaining available to assist them in any way I can.

What is my contribution towards the team's use of Scrum?

I was active in deciding what had to be done this week and which user stories should be moved to the sprint backlog and I helped make the checklist items for the user stories. I have also contributed in splitting them up into tasks for this week's sprint. In addition to this I actively shared my thoughts and ideas about the sprint when we wrote this week's team reflection. (No different from last week, as my contributions to scrum were the same). Next week I hope to be able to contribute to the team's use of scrum in the same way I have this week. In order to do this I should continue to prioritize the structured process we're trying to follow throughout this project.

What is my contribution towards the team's deliveries?

This week I contributed to the deliveries by being active in the team meetings and the decisions made by the group. I took part in writing CSS- and HTML-code for the calendar and several buttons across the website. The "next" and the "previous" buttons for example. Next week I would like to contribute in making functionality for the calendar.
