What do I want to learn or understand better?

Next week I want to learn how to code in JavaScript as that is something I have never done before. I also wish to continue improving in CSS coding as well as in "slicing the cake" in Scrum.

How can I help someone else, or the entire team, to learn something new?

By remaining open and available to assist my team members with anything I might know more about than they do and by actively discussing issues none of us are familiar with we can learn together by collectively reaching a conclusion.

What is my contribution towards the team's use of Scrum?

I was active in deciding what had to be done this week and which user stories should be moved to the sprint backlog. I have also contributed in writing more user stories for the backlog and splitting them up into tasks for this week's sprint.

What is my contribution towards the team's deliveries?

This week I contributed to the deliveries by being active in the team meetings and the decisions made by the group. I also helped code the HTML- and CSS-code for several of the website's pages. In addition to this I contributed to the team reflection with my perspective of the sprint.
